PREFACE

The Society is grateful to the Twenty-Seven Foundation for financial assistance towards the publication of this volume, and to the Controller of Her Majesty's Stationery Office for permission to reproduce the contents of Crown copyright material in the Public Record Office. Dr. Crowley also wishes to thank the Society's Honorary Editors during the years of the volume's preparation, and particularly its President, Mr. C. R. Elrington, for his encouragement and advice.

JANE FREEMAN

INTRODUCTION

On 10 September 1332 parliament granted Edward III a fifteenth and a tenth of the movable goods of the laity of the realm.¹ Those with movable goods in cities and boroughs and on ancient demesne of the Crown were to contribute the tenth, others the fifteenth. Parliament had granted fractions of such goods to the king from time to time since 1283 and by 1332 such grants had become a familiar form of taxation. The grants, which were universally understood to be grants of the money value of the fractions, were not always of the same fractions and did not always distinguish the classes of taxpayers. To raise the money in 1332 the king appointed for each county principal assessors and collectors who appointed under-assessors: the under-assessors made the assessments, received the money, and transferred it to the principal assessors and collectors who paid it to the king through his exchequer.² Two assessors and collectors were appointed for each county, including Wiltshire, on 16 September 1332.³ There were 134 under-assessors for Wiltshire.⁴ Lists of the movables of each taxpayer were to be made by the under-assessors and summarized in a county list.⁵ No under-assessor's list of 1332 survives for Wiltshire, where in many cases no more than the total value of each taxpayer's movables, or perhaps no more than his liability for tax, may have been listed.⁶ The Wiltshire county list, compiled in the winter of 1332-3 and handed in at the Exchequer on 23 February 1333,⁷ is the Wiltshire tax list of 1332 edited below.

The document. The tax list consists of 31 parchment rotulets, each measuring c. 70 cm. by c. 23 cm., sewn together at the head. It appears complete; neat and, for the most part, legible writing is in double columns on both sides of rotulets 1-30 and on the face of rotulet 31; and the small holes through rotulets 7-18 cause little loss. Between the short preamble and the short post-scripts the administrative divisions of Wiltshire are named in rubrics, under each of which the names of those assessed for taxation, the amount at which each was assessed, and the total assessment for the division are given. Most of the document is the work of two scribes, presumably working simultaneously. Under modern conditions the document might take one person between a week and a fortnight to transcribe; in the winter of 1332-3 it may

have taken the two scribes about the same time. Rotulets 1–14 are in one hand and 1–13 are numbered, apparently contemporarily, by small Roman numerals; and the faces of rotulets 15 and 16 are in the same hand. Rotulets 14–15 are not numbered, and the entries on the dorse of 15 for Bishop's Rowborough hundred are in a second hand. Rotulets 16–23 are distinguished, also apparently contemporarily, by lower case letters a–h, from 18 bearing additionally the inscription 'per W'; rotulet 24 is not numbered, but 25–30 are marked k–p: from the dorse of rotulet 16 the entries are apparently in a third hand. Rotulet 31 is not numbered and on it the entries for Cannings hundred may be in a fourth hand. It is very unlikely that the work of the two main scribes corresponded with a division of the county between the principal assessors and collectors, and likely that the draft returns from the under-assessors were divided randomly, but roughly equally, between the scribes. The position of the entries for the adjoining and related hundreds of Bishop's Rowborough and Cannings,¹ each at the end of one scribe's portion, and in a third and possibly fourth hand, suggests that the returns from those hundreds were not the responsibility of the Wiltshire assessors and collectors or, more likely, that they were late.

The divisions of Wiltshire. The 1332 tax list apparently covers all Wiltshire as it then was, including what are now parts of Berkshire, Gloucestershire, and Hampshire.² The tenth was levied on Wiltshire's only city, Salisbury, 11 boroughs, and four areas of ancient demesne. The fifteenth was levied on two liberties and on the subdivisions of a liberty and 39 hundreds. Such were the administrative divisions of the county, distinct from the topographical division into towns, villages, and hamlets, and from the ecclesiastical division into parishes and chapelries.³ The topographical, ecclesiastical, and administrative maps of Wiltshire in 1332 obviously had many lines in common, but the three divisions had different origins and histories and the three maps had many different pieces in the jigsaws which made them up.

Salisbury comprised four wards in 1332, but none of the boroughs was subdivided. The boroughs were Wilton, Downton, Chippenham, Devizes, Malmesbury, Ludgershall, Calne, Cricklade, Bedwyn, Marlborough, and Old Salisbury. They were apparently the parts of Wiltshire with or formerly with systems of self-government based on burghal tenure which were outside hundredal jurisdiction.⁴ They had all been summoned to the model parliament of 1295, presumably as such. Bradford, summoned in 1295 but not afterwards,⁵ was not ranked as a borough in 1332. In some cases the extent of the borough is not clear: the taxpayers of Marlborough, Devizes, and Downton,⁶ for example, seem likely to have been inhabitants of a small area, more

or less built up, but other boroughs, such as Calne and Chippenham, may have included land outside the built-up areas.

Rowde, Melksham, Broom, in Swindon, and the barton of Marlborough were assessed as ancient demesne of the Crown. The first and last were the estates attached to the royal castles of, respectively, Devizes and Marlborough,¹ and Melksham was a royal manor until the later 13th century when it was proved to be ancient demesne.² Broom presumably made good a claim to be ancient demesne on the grounds that Henry I gave it to the priory of Marcigny,³ and it may have been considered such in 1305.⁴

The two liberties on which the fifteenth were levied were Bromham, a greatly privileged liberty of Battle abbey in Sussex, and Longbridge Deverill, a liberty of the bishop of Salisbury. Each was like a small private hundred.⁵ Everleigh liberty, subdivided into four, was a private hundred of Henry, earl of Lancaster.⁶

Everleigh and the 39 other hundreds of Wiltshire in 1332 had a total of 543 subdivisions. The total includes Broom, Melksham, and all the subdivisions in rubrics in which more than one subdivision is named. Some of the subdivisions were territorial tithings, areas of the county represented at a sheriff's tourn or privately held view of frankpledge by a tithingman. Such tithings may have been evolving in Wiltshire in the mid 13th century⁷ and were generally recognized as divisions of hundreds for the administration of justice in the later Middle Ages.⁸ Some were still used as divisions of hundreds in the 18th century and early 19th for land-tax assessments⁹ and census returns.¹⁰ In many cases the pieces of the administrative, topographical, and ecclesiastical jigsaws were identical, and in many cases in 1332 the lands of the tithing, a village, and the parish were apparently identical: three of many examples are Stanton Fitzwarren, Stanton St. Bernard, and Stanton St. Quintin. Other subdivisions of the hundred named in the tax list were apparently small villages. Ramsbury, East Knoyle, and Bishopstone near Salisbury illustrate the two kinds of subdivision. Ramsbury parish embraced Baydon and Axford villages and several other smaller settlements including Whittonditch, Membury, Knighton, Hilldrop, and Littlecote; Baydon was a chapelry. For the tax of 1332 the whole parish may be assumed to have been assessed under the rubrics Ramsbury, Ashridge, Eastridge, and Baydon, all four of which names are later known to have been those of tithings.¹¹ East Knoyle parish embraced Hindon borough and East Knoyle, Milton, and Upton villages: East Knoyle and Milton

were tithings.¹ The subdivisions recorded in the 1332 tax list, however, were Hindon, Bishop's Knoyle, and Upton, but not Milton. Bishopstone parish had in it six small villages in three tithings:² in the tax list all six villages were named. In other cases more than one parish, as well as more than one village, are embraced by a subdivision: for example, the taxpayers listed for Donhead, Codford, Chitterne, and Biddestone may be assumed to have had movables in the parishes, respectively, of Donhead St. Mary, including Charlton, and Donhead St. Andrew, of Codford St. Peter, excluding Ashton Giffard which was separately listed, and Codford St. Mary, of Chitterne All Saints and Chitterne St. Mary, and of Biddestone St. Nicholas and Biddestone St. Peter.

Those ways of subdividing the hundred show early 14th-century arrangements to be somewhat haphazard, and complicate the tax list as a source for historians. The subdivisions might be hamlets, tithings comprising a single village or hamlet, tithings less than a parish but comprising more than a single village, tithings conterminous with a parish, or tithings comprising both more than one village and more than one parish, and until each subdivision is understood comparison is meaningless. The absence of a name from the list of subdivisions, of Manningford Abbots or of Charlton near Donhead St. Mary for example, does not mean that a village so called did not exist or that its inhabitants were not taxed: that villages or tithings could be grouped in the record of the assessment is clear from rubrics which contain two or more names. On the other hand, some names in the list, such as Ashridge, as King's Rowborough, a tithing possibly embracing Easterton and Littleton Pannell, both near Market Lavington, and as Hatch, a tithing containing several settlements in Tisbury parish,³ later had little currency: that was because they were of tithings, not of villages, hamlets, or even deserted villages.

Wiltshire had fewer parishes than tithings and fewer tithings than villages and hamlets. For example, in 1332 Swanborough, Studfold, and King's Rowborough hundreds, later merged as Swanborough hundred, had 20 parishes and 2 chapelries, there were 29 subdivisions in the tax list, and *c.* 33 villages in the hundreds: the assessments of Huish, Littleton Pannell, Manningford Abbots, and East Stowell, none of which was named in the list, may have been covered by, respectively, those of Draycot Fitz Payne or Oare, of King's Rowborough, of Pewsey or Manningford Bruce, and of Wilcot or Stowell in Elstub hundred. In parts of Selkley and Elstub hundreds 10 parishes had 28 subdivisions in the tax list and *c.* 30 villages; and in Chalke hundred 8 parishes had 11 subdivisions and 12 villages.⁴

The assessors and collectors. The Wiltshire assessors and collectors appointed in 1332 were Hildebrand of London and John of Harnham.⁵ Neither seems to have owned an extensive estate. London was lord of Axford manor near Ramsbury and probably later of the adjacent Stitchcombe manor: he may have

lived at Axford where a house, which may have been moated, incorporates part of a 14th-century chapel.¹ Harnham apparently had an estate at Harnham near Salisbury.² If not great wealth, their estates presumably gave them the time and independence to work and travel for the king, and neither was a stranger to royal administration before 1332. Hildebrand of London was sheriff of Wiltshire in 1330-1 and was later sheriff of Somerset and Dorset and, until found ineligible, of Devon;³ and in the 1330s and early 1340s he served the king in various other ways.⁴ John of Harnham (d. c. 1336) was with Edward II in his campaigns against the Scots in 1322 and was appointed surveyor of Clarendon park in 1331, keeper of Wilton in 1332, and keeper of Freshwater manor in the Isle of Wight in 1333.⁵

The under-assessors. There were five under-assessors for Salisbury, two for each borough, two for each liberty, and, in rough proportion to its size, two, three, or four for each hundred. Although it was provided for them to be chosen by the assessors and collectors at meetings of the lawful men of each part of the county,⁶ such a cumbersome administrative process seems unlikely to have been followed. The assessors and collectors were commissioned on 16 September 1332, and there may not even have been a meeting of the hundred courts before the assessments were made, probably about Michaelmas 1332.⁷ In such a case the effective choice may have rested with the hundred bailiff. There is little doubt that the under-assessors lived in the hundreds for which they were appointed. Some, including Wibert of Charlton at Charlton in Chedglow hundred, John Lyngyvere at Chicklade in Dunworth hundred, and John Skilling at Charlton in Swanborough hundred, apparently had freeholds later small reputed manors. Others, including Richard Alwyne at Gurston in Chalke hundred, Roger Ellis at Aldbourne in Selkley hundred, and Roger Highway at Baydon in Ramsbury hundred, seem to have been members of families with such estates. John of Rushall, an under-assessor for Swanborough hundred, apparently acquired such an estate at Allington in Studfold hundred by marriage, John Uphill, an under-assessor for Downton hundred, apparently acquired Flamston manor thus, and Robert of Ramsbury, an under-assessor for Elstub hundred, similarly acquired Coombe manor in that hundred.⁸ Ownership of land need not imply competence or wealth in movables, but such under-assessors clearly had standing in their villages and hundreds. If they could be respected for their status, and if they were competent,

had local knowledge, and regularly participated in local affairs, it is likely that their assessments were authoritative and generally accepted. The movables of the under-assessors themselves were to be assessed by other local men under the direction of the assessors and collectors.¹ Again, it seems unlikely that the instruction was followed to the letter. None of the under-assessors was highly assessed. Apart from Salisbury, the highest assessment was 5s and after that 2s. The low assessments seem difficult to explain. Wibert of Charlton, for example, might have been expected to rank higher than tenth in the assessments for Charlton and Garsdon. Individual low assessments might be explicable because, despite his status, the under-assessor may not have had many movables; but what appear consistently low assessments of under-assessors may mean that a low assessment, whether made by the under-assessors themselves or by the assessors and collectors, was an informal reward for the work of assessment.

The assessment. The movables valued for the fifteenth by the under-assessors were farm livestock and agricultural produce: they did not include agricultural implements, household goods, and food not for sale. Movables valued for the tenth included household goods, merchandise, tools, and other goods.² From those valuations there were two principal exemptions. In 1332 none having movables valued at under 10s or 6s was to pay, respectively, the fifteenth or the tenth: the lowest payment for the fifteenth was therefore 8d, that for the tenth effectively the same. That excluded from the tax cottagers and those living in the households of better-off husbandmen, tradesmen, and artisans. Those excluded may have been a considerable part of the population but obviously would have had little to contribute to the tax. Secondly, movables on property owned by the church in 1291 or earlier were exempt.³ That exemption did not extend to the tenants of individual clerks or of ecclesiastical corporations, but most ecclesiastical property in Wiltshire was acquired before 1291 and most monastic and other ecclesiastical demesne was directly managed,⁴ and therefore exempt, in 1332. Places where much livestock and agricultural produce belonged to the church might therefore appear less highly assessed than others, and in Wiltshire in 1332 many places are likely to have appeared so. In Chedglow hundred, for example, Malmesbury abbey may have had demesne land in every subdivision except Oaksey, but not, of course, the same amount in each place.⁵ The value of movables paid as tithe, and of movables on glebe land that was not leased, were presumably excluded from all the assessments, and some rectors held large estates.⁶ Although it may be assumed that cottagers and resident servants were to be found in roughly equal proportions in places throughout the county, comparisons of the total assessments of the subdivisions of the hundreds depend on knowing not only

what villages were in each subdivision but also how much ecclesiastical demesne land in hand each contained. Clearly those who were taxed were the tradesmen and artisans of towns and the husbandmen of villages, and they were apparently assessed by men at the upper end of their own class. Aristocrats might be taxed where they had a house in the county, like Edward de Bohun at Vasterne, or where they had demesne land in hand, like Henry, earl of Lancaster, at Collingbourne Ducis, Everleigh, and Hannington, but few were. Some 900 women owners or tenants of land, presumably many of them widowed, were assessed, *c.* 9 per cent of the taxpayers; but there was no woman under-assessor.

In valuing the movables of the taxpayers the under-assessors apparently used different methods. In a ward of Salisbury, some boroughs, and many subdivisions of hundreds the assessments were expressed in round numbers of shillings and pence; in other places fractions of a penny formed part of many assessments. For example, from Cricklade borough not one of 36 assessments specified a fraction of a penny; for Bedwyn borough 15 of 19 did. The distinction between such places could have been caused by different methods of arithmetic or of assessment. To divide nearly any sum of money expressed in pounds, shillings, and pence by ten or fifteen presents obvious difficulties and not many sums, when so divided, would give a quotient which could be expressed exactly even in halfpennies and farthings. The movables might have been valued exactly and, after division by ten or fifteen, the tax rounded off to the nearest farthing, thus producing the many assessments specifying fractions; the movables might have been valued exactly and the quotients rounded off to the nearest 1d or 2d; and the movables might have been valued deliberately at sums which would divide conveniently by ten or fifteen. On the other hand, the tax might have been assessed summarily without more than a cursory valuation of movables. Under-assessors lists survive for subdivisions of several Buckinghamshire hundreds.¹ For each taxpayer they specify animals and crops, the amounts at which they were valued, the total valuation, and the fifteenth of the total valuation. The calculation of the 15th inspires confidence: a total valuation of 14s 8d, for example, led to a tax liability of 11 $\frac{3}{4}$ d. In generally accurate division there was inevitably much rounding up and down to fractions of a penny; as might be expected when valuations were meticulous, fractions of a penny are part of many of the sums to be paid as a fifteenth; but very few taxpayers were liable for the minimum 8d. In some subdivisions assessment was apparently less meticulous and, in them, a total value of goods was given in many cases without specifying animals and crops and their valuations: more were liable to pay the minimum. The Buckinghamshire lists suggest that the difference between subdivisions in which there were many fractions and those in which there were few arose from the method of assessment. For Wiltshire the proportion of assessments in which there are fractions varies more between hundreds than between subdivisions: for Melksham and King's Rowborough hundreds, for example, no assessment specifies a fraction of a penny; for most hundreds there are few fractions; but for Bradford, Cricklade, and Kinwardstone there are many. That suggests that in each

1. *Early Taxation Returns* (Bucks. Rec. Soc. xiv), 2-97.

hundred the under-assessors worked by the same ground rules if not as a group. In Chippenham hundred, however, where subdivisions differed significantly in the amount to which fractions were specified and there were four under-assessors, the under-assessors may have worked singly or in pairs. The Wiltshire tax list, on which many are recorded as liable for the minimum 8d, gives the impression that most assessments were summary. Without the connivance of the under-assessors, however, it is unlikely that there could have been large-scale evasion in villages where, especially in regions of open fields and common pastures, neighbours are likely to have known the amount and quality of each other's farm livestock and produce; and the valuations might therefore be roughly accurate and the list a nearly complete record of those liable for tax. On the other hand, if there were two methods of assessment, meticulous and summary, and the summary led to lower tax liability or more taxpayers, it is not surprising that complaints were made and that the method of levying the tenth and fifteenth was changed in 1334.¹

Wealth and population. Although the tax list may be a nearly complete record of those liable for tax, it does not indicate population. If the area covered by a borough or a subdivision of a hundred is known, and if the omission of movables on ecclesiastical land in hand is allowed for, it is possible to infer that one place was more prosperous than another and therefore likely to be more populous, but those conditions are difficult to meet. The inference is likely to be most valid for the boroughs. To infer more, however, would be unsound: the tax list deals with only one class, in effect those with holdings of land above a certain minimum, unspecified, size, and the size of that class indicates nothing about the size of another. Even in 1801 or 1841, for example, when the population of a parish or tithing is known, that population could clearly not have been deduced from the number of those named in land-tax assessments or tithe awards as occupying land, even less so from the number said to occupy, say, 20 acres or more, because places with a few large farms might have as many or more inhabitants as places with many small farms. The tax list itself may reveal differences in the social structure of villages: a village with one or two high assessments may have been different from one in which average assessments predominate. Again, however, it is more likely that knowledge of a village's history will explain the tax list than *vice versa*.

Tax paid. On the county roll each taxpayer's assessment was neatly written beside his or her name. One assessment was made too late to be included under the appropriate rubrics. At the end of the tax list is John Goodhind's assessment, a tenth of his movables in Marlborough at 33s and a fifteenth of his movables in Manton in Preshute and Rockley in Ogbourne St. Andrew at a total of 47s. Goodhind was a Marlborough merchant² and together those assessments made him apparently the most highly assessed taxpayer in the county. The delay in assessing his movables seems unlikely to have been caused

1. *Calendar of Patent Rolls*, 1334–8, 38.

2. *V.C.H. Wilts.* xii. 208.

by his wealth because other assessments for both the tenth and fifteenth were higher. The difficulty of distinguishing the boundaries of Marlborough, Manton, and Rockley may have troubled the under-assessors when so much wealth was to be assessed at different rates, but in principal seems no greater than such difficulties elsewhere.

For each ward of Salisbury, each borough, liberty, subdivision of a hundred, and group of under-assessors the total of the assessments of each taxpayer was entered, as were the grand totals for Salisbury, each borough, each liberty, and each hundred. At the end of the roll are separate totals of what was due as a tenth, as a fifteenth, and from the whole county. The adding up was presumably done by the scribe, and in the whole tax list only one mistake, in the total for Bincknoll, has been noticed. The *c.* 9,700 taxpayers of Wiltshire were assessed for a total of *c.* £1,490, an average of *c.* 3s each. The 170 taxpayers of Salisbury paid £72 10s as a tenth, an average of 8s 8d each; the *c.* 530 taxpayers of the boroughs and ancient demesne paid £96 as a tenth, an average of nearly 3s 6d each; the remaining 9,000 paid £1,319 as a fifteenth. Among the boroughs the totals for Malmesbury and Chippenham were highest, those for Old Salisbury and Bedwyn were lowest. Among the hundreds the totals for Chippenham and Amesbury were highest, those for Staple, Knoyle, and Ramsbury were lowest.

The assessors and collectors had to hand in the county roll at the Exchequer and account for the money. The arithmetic on the roll was apparently checked there and most totals were marked 'probatur'. The incorrect total for Bincknoll, however, was not noticed. In many cases a mark like a letter 'q', written with a flourish and sometimes with a full point to each side, follows 'probatur'. In account rolls such a mark is most likely to stand for 'et quietum est', but the use of the mark on the tax list does not follow a pattern, and the accounting process at the Exchequer which would lead to the entry 'et quietum est' hazily on a county roll is obscure. Among other possibilities the mark might stand for 'confirmatur' or 'computatur'. It has been excluded from the edition. The last assessments on the Wiltshire roll are those of the assessors and collectors themselves which, according to normal procedure,¹ were made by the treasurer and barons of the Exchequer. Such assessments of Hildebrand of London at 30s and John of Harnham at 20s, each presumably for a fifteenth, made three months after they handed in the county roll, are almost certain to have been summary.

Taxpaying after 1332. The tenth and fifteenth of 1332 was the last subsidy in England for which the liability of individual taxpayers was separately reported to the Exchequer. When parliament granted a tenth and a fifteenth to the king in 1334 a new assessment of individuals was not required. Provided that it was no less than it had been in 1332 the amount to be paid by each tax district as a whole was agreed on by the assessors and collectors and the representatives

1. *Surrey Taxation Returns* (Surr. Rec. Soc. xviii), p. x.

of the district. Grants of subsidies after 1334 required, with occasional qualification, each district to pay what it had paid in 1334.¹ A forerunner of such compounding of a district's liability for tax is revealed in the Wiltshire tax list of 1332. Pewsey and Collingbourne Kingston each avoided individual assessment of their inhabitants by the under-assessors of Kinwardstone hundred in 1332 by compounding at the Exchequer as a community.² Each was highly assessed in 1334³ and individual assessment little different from that by the under-assessors elsewhere may have preceded the collection of the money for the fine by which they compounded in 1332. The advantage to each community was possibly that it had its own under-assessors, and such an advantage, avoiding visits by peripatetic under-assessors, may have made the new arrangements of 1334 palatable to all communities. It is not clear why Pewsey and Collingbourne Kingston, in each of which Hyde abbey, Winchester, held a large estate,⁴ were allowed to compound in 1332. They may simply have used their own initiative, or acted on advice, and offered an acceptable sum to the Exchequer.

Method of editing. In the edition of the Wiltshire tax list below all Latin has been translated into English and Roman numerals have been changed to Arabic, but 'de', 'la', and 'le' preceding surnames have been left in the French. The use of capital and lower-case letters, sometimes difficult to distinguish in the original, has been rationalized throughout.

The names of places in the rubrics have been given modern spelling but not modern form, and Latin words in them have been translated. The name of each place as it appears in the document is given in italics and parentheses, using the same expedients adopted in transcribing surnames.⁵ In the lists of taxpayers, place names used not as surnames but as addresses, peerage titles, or to locate hospitals and priories, are treated similarly. Where necessary the places are identified in the Index of Places.

Forenames are among the words translated from Latin to English, but in a few cases, in which translation would be speculative, the original is retained in italics. Where an abbreviated Latin forename could stand for more than one English name the more common English name is sometimes given without remark: thus '*Ad*' is rendered as 'Adam' not 'Adelize', '*Is*' as 'Isabel' not 'Imbert' or 'Iseult', and '*Thom*' as 'Thomas' not 'Thomase'. In other cases, such as 'Mary (*Mar*)', 'Godfrey (*God*)', 'Cecily (*Cecil*)', 'Matthew (*Mat*)', and 'Denis (*Dyonis*)', the original is given in italics and parentheses after the most likely English name as a reminder that other names are possible. The alternatives 'Edward' and 'Edmund' are offered for '*Edo*', 'Luke' and 'Lucy' for '*Luc*', and 'Margaret' and 'Margery' for '*Marg*'.

As nearly as possible each surname is rendered in the edition in the form in which it appears in the document. Many doubts arise about what letters

1. *Surrey Taxation Returns* (Surr. Rec. Soc. xviii), pp. v-vi, xix-xxi; *V.C.H. Wilts.* iv. 294-5.
2. Below, p. 127.
3. *V.C.H. Wilts.* iv. 300.
4. *Feudal Aids*, v. 217.
5. Below.

a scribe has written: for example, 'Downing' and 'Donning', 'Baccon' and 'Baton', and 'Souche' and 'Southe' are not usually distinguishable. In such cases, and in many others, what appears to be the most likely form has been adopted, and some guidance is provided by rotulet 15 of the manuscript on which the hand is unusually careful. Contractions, suspensions, and the occasional yoghs have been extended by normal rules and judgement: final suspensions, where nothing else is apparently intended, have been extended by the single letter 'e', and in a few cases an apostrophe has been used to indicate a suspension.

Under each rubric the abbreviated word 'De' before the name of each taxpayer has been omitted. Roman numerals have been changed to Arabic to express sums of money, but the form of each sum has not been changed: for example 55s 8½d is not rendered £2 15s 8½d. Each gap in the manuscript caused by damage to it is marked in the edition by three full points, and the few editor's interpolations are in square brackets.

THE WILTSHIRE TAX LIST OF 1332

Pewsey (*Peuesy*)

Nothing is received from that vill because the community of the vill made a fine in the king's court as is shown by his writ addressed to us in these words. 'Edward by the grace of God king of England, lord of Ireland, and duke of Aquitaine, to his beloved Hildebrand de Londone and John de Harnham, the assessors and collectors of the fifteenth and tenth granted to us from the laity in the county of Wiltshire, greetings. Whereas Walter de

Peuesy, William de Rameshulle, John de la Roche, William Percchai, and Nicholas de Roude in our court before the barons of our exchequer on the 10th day of November last acknowledged themselves, and each of them collectively, to owe us a certain sum of money to be paid at our exchequer by a certain time for the fifteenth movable goods of the community and of every person of the vill of Pewsey (*Peuesy*) in that contingent county. Because of that we wish that the goods and chattels of the community and of those people should not this time be assessed by you for that fifteenth and tenth. We command you that you should entirely neglect the assessment of the movable goods of the community and those people for that fifteenth in that vill, and you should not intermeddle there. And if you have levied anything therefrom you should return those things without delay. Witnessed by Master R. de Aylestone, archdeacon of Berkshire, our treasurer, at Westminster on the 11th day of November in the 6th year of our reign.'

The vill of Collingbourne (*Colyngeborne*) not assessed here because it made a fine in the exchequer for the assessment of each person of that vill, as is attested by a writ of the lord king addressed to the assessors and collectors of the tenth and fifteenth appointed in that county.

Thomas Garlyke	2s		

Total of all the tenth and fifteenth of all the said county, except the villis of Pewsey (*Peuesy*) and Collingbourne (*Colyngeborne*) which made fine, and except John Goudhyne, merchant, not yet assessed, £1,483 8s 6d.

Afterwards that John Goudhyne was assessed for the fifteenth of his goods and chattels in Rockley (*Rokle*) and Manton (*Mantone*) at 47s; and that John was assessed for the tenth of his goods and chattels in the borough of Marlborough (*Marleberge*) at 33s.

The end total, £1,487 8s 6d; of which from the tenth of cities, boroughs, and villis of the ancient demesne £168 $\frac{1}{2}$ d, and from the fifteenth of the community of the county £1,319 8s 5 $\frac{1}{2}$ d.

The assessments of ... the assessors. The assessment of the movable goods of those chief assessors and collectors made by the treasurer and barons of the exchequer the eleventh day of May in the ... year of King Edward, the third from the Conquest: the said Hildebrand 30s, the said John de Harnham 20s. Total 50s.

MASTER ROBERT DE AYLESTONE, THE TREASURER, RECEIVED THESE ROLLS THE TWENTY-THIRD DAY OF FEBRUARY IN THE SEVENTH YEAR OF KING EDWARD, THE THIRD AFTER THE CONQUEST, BY THE HAND OF HILDEBRAND DE LONDONE AND JOHN DE HARNHAM, ASSESSORS AND COLLECTORS OF THE FIFTEENTH AND TENTH LATELY GRANTED TO THAT KING IN THE COUNTY OF WILTSHIRE, THE SAME GIVEN ...

GENERAL INDEX

Nearly all the entries in this index are surnames: a few identify subjects, peerage titles, or religious orders. The modern forms of some names appearing in the introduction are separately indexed; otherwise, except for those of peers, the surnames are indexed, and where appropriate drawn together, under a spelling which appears in the original manuscript. The surnames of peers are those given in G. E. Cokayne, *Complete Peerage*. No attempt has been made to identify as a peer any person not referred to as one in the manuscript. Place names appear in a separate index.

INDEX OF PLACES

Places are in Wiltshire unless otherwise stated. Nearly all the names indexed are those of boroughs, wards, hundreds, liberties, tithings, and villages: a few names identify hospitals and priories. Liberties and tithings which, in the early 19th century, were neither ecclesiastical nor poor-law parishes, and villages which did not give their names to such parishes, are each identified by the name of such a parish. In those cases, and in cases in which a modern name is added for identification, there are cross-references where appropriate. There is no cross-reference where further identification of a tithing, the name of which was that of an ecclesiastical or poor-law parish in the early 19th century, is necessary. Peerage titles and names of religious orders are in the General Index.
